

```
import com.mongodb.client.MongoClient;
import com.mongodb.client.MongoClients;
import com.mongodb.client.MongoCollection;
import com.mongodb.client.MongoDatabase;
import com.mongodb.client.FindIterable;

import com.mongodb.client.model.Filters;
import com.mongodb.client.model.Updates;

import org.bson.Document;

public class MongoCRUDEExample {
    public static void main(String[] args) {

        // Connect to MongoDB
        MongoClient mongoClient =
            MongoClients.create("mongodb://localhost:27017");

        // Access database
        MongoDatabase database =
            mongoClient.getDatabase("CollegeDB");

        // Access collection
        MongoCollection<Document> collection =
            database.getCollection("Students");

        // CREATE
        Document student = new Document("id", 101)
            .append("name", "John")
            .append("department", "CSE")
            .append("cgpa", 8.7);
```

```
collection.insertOne(student);

System.out.println("Document Inserted Successfully");

// READ

System.out.println("\nStudent Records:");

FindIterable<Document> students = collection.find();

for (Document doc : students) {
    System.out.println(doc.toJson());
}

// UPDATE

collection.updateOne(
    Filters.eq("id", 101),
    Updates.set("cgpa", 9.2)
);

System.out.println("\nDocument Updated Successfully");

// READ UPDATED RECORD

Document updatedStudent =
    collection.find(Filters.eq("id", 101)).first();

if (updatedStudent != null) {
    System.out.println(updatedStudent.toJson());
}

// DELETE

collection.deleteOne(Filters.eq("id", 101));

System.out.println("\nDocument Deleted Successfully");
```

```

        mongoClient.close();
    }
}

```

The image shows a screenshot of an IDE with a Java file named `MongoCRUDEExample.java` and its output window.

Java Code:

```

13 //
14
15 import com.mongodb.client.*;
16 import com.mongodb.client.model.Filters;
17 import com.mongodb.client.model.Updates;
18 import org.bson.Document;
19
20 public class MongoCRUDEExample {
21     public static void main(String[] args) {
22         // Connect to MongoDB
23         MongoClient mongoClient = MongoClient.create("mongodb://localhost:27017");
24         // Access database
25         MongoDBDatabase database = mongoClient.getDatabase("CollegeDB");
26         // Access collection
27         MongoCollection<Document> collection =
28             database.getCollection("Students");
29         // CREATE (Insert)
30         // =====
31         Document student = new Document("id", 101)
32             .append("name", "John")
33             .append("department", "CSE")
34             .append("cgpa", 8.7);
35         collection.insertOne(student);
36         System.out.println("Document Inserted Successfully");
37         // =====
38         // READ (Find)
39         // =====
40         System.out.println("\nStudent Records:");
